VIKSIT BHARAT@2047

BY UTARSH GARG

IN 1947, 15 AGUST INDIA WOKE TO FREEDOM AND IN 2047 INDIA WANTS TO BE AWAKEN TO GREATNESS.

As we all know VIKSIT BHARAT@2047 was announced by our honoured Prime minister SHRI NARENDER MODI on 15th august 2022 on 75th independence day when india was celebrating AZADI KA AMRIT MAHOTSAV. In the speech itself our prime minister talked about devlopment and its different parameter and where our country stands on the level of devlopment. He also compared india with several devloped and devloping countries to creat a contrast and set a realistic future plan for a better tomorrow of india. Before anything there is need to understand what viksit bharat means. When india was

compared with different countries it was noticed that even after 75 years of independence India was still a developing country and there were uncountable problems which were waiting for a solution and there were several challenges which India needed to tackle before being a developed country so our prime minister Shri Narendra Modi initiated a national vision that aims to make India a fully developed country in every sector whether it is economy, society, technology, environment or any other. It was aimed to make India a developed, strong, self-reliant and a prosperous country before 2047 i.e. India completing 100 years of independence. It was a long roadmap for the future. Including several key features and pillars. Developed India does not mean making huge buildings or pucca homes everywhere, developed India does not mean growing day by day but lower sections being left behind developed India means where everyone has a work to earn living, where no one sleeps with an empty stomach, where no matter the size of building the productivity should be high there should be no discrimination or no section in the society should be left behind or be unnoticed in the road of development. Everyone should have equal access to everything and

each needs of citizen should be fulfilled. There are different pillars of viksit bharat 2047 lets discuss each pillar..

1) ECONOMIC PROSPERITY..

Under this pillar of viksit Bharat india aims to build A strong high income economy with global connectivity, interconnectedness and comeptition. According to viksit bharat india needa to establish manufacturing units to be self reliant and suucesful so india could produce the needs of indian citizen in india itself and is not dependent on anyone. For this india has established several special economic zones and have promised several benfit in order to attract investment. India want to not only become a huge economy but be A SELF RELIANT one.

2) SOCIAL EQUALITY..

Before 2047 india aims to build a equal society in which resources are equally distributed among everyone, no one has to face any kind of discrimination or no section of society is deprived of anything. India is full o diversity in which some section tend to take gain on resources this is what

India needs to change and establish equity. There are many people who face discrimination in school, employment exchange and all so it is necessary for us to change this living pattern and establish a just society.

3) GROWTH, DEVELOPMENT AND DIGITAL INDIA

Developed India does not mean establishing manufacturing units, building large towns and cities. The buildings and unit does not matter if they are hollow from inside.. buildings and unit should be made in such a manner that no matter their size the productivity should be at maximum the mind working inside should be able to contribute in right manner. To accelerate the growth of our country India Digital India campaign was launched aiming at creating digital connectivity all around India even in the smallest village. It also aims to make the infrastructure and technology get advance. It aimed at creating service such as banking, booking etc being online so its accessible to all.

4) GOOD GOVERNANCE AND EASE OF LIVING

Developed India cannot be completed without government being accountable and responsive to

public need and demand. A developed country must have a good governance system free of corruption in which leaders are responsive to need of people and on the top of that developed countries also ensure a good standard of living in which people have easy access to water, food shelter and other basic amenities. Governance and standard of living and how easily people manage plays a key role in any country being developed or not.

Its always easy to say about all this and set targets like this but it becomes very very difficult to deal with it and work in right manner to achieve it. For example in india when we talk about development the scenario is always strange to see like the high end class try to exploit the other bu taking all the resources and benefit. Often weaker sections are left behind to just suffer which makes it difficult for the society to be just. Yes it is true that our government is taking hundreds of initiatives to achieve the goals. Like different flagship events in which government tries to creat a surrounding for rural employment and development. Mera yuva bharat... this is one of the most influential scheme launched by

government as in this the government runs different campaign in which they provided different modern skills to the youth of india and at the end of each campaign there is a session in which they are asked what they have learned and how they can contribute in better tomorrow india. Different industrial corridors have been also established in order to make efficient use of raw material produced in india. PM gram sadak yojna in which it aims to create connectivity even in rural areas. Different health and employment schemes have also been introduced.

Only around 20 years are left if we talk about our aim so it becomes very important for us to take the right actions now .. otherwise it would be very late and if the actions are not taken in right manner it would be almost impossible to have a developed india.

We need to work and grow together.
